FOR IMMEDIATE RELEASE

**CapStone Technologies introduces AutoViri™ Software
to connect mailers' physical and digital mail operations**

The patented software is the only solution of its kind for the print-to-mail industry.

Lincoln, Neb., September 23, 2019 -- CapStone Technologies has introduced AutoViri Software, part of a comprehensive solution designed to make print-to-mail operations more efficient. The software is patented and is the only solution in the industry that gives mailers virtual visibility into the entire mail production process.

Cloud-based AutoViri Software puts real-time information, such as job status and errors, in the hands of employees at every level in every department of a print-to-mail business. This information can be accessed 24/7 from anywhere, streamlining the work of production employees, management and leadership. The software can be used in any print-to-mail environment – automated, manual or anywhere in between.

With AutoViri software, mailers can find and fix 17 costly USPS Mailer Scorecard errors before jobs are released to the USPS, protecting their workshare discount and increasing profitability. The software also provides a proven audit trail to help mailers challenge erroneous USPS penalties and continually improve operations.

“AutoViri Software is a powerful new tool for mailers of any type or size, especially small and medium-sized mailers not accustomed to having access to this level of automation specifically to suit their operations and budget,” said Troy Power, co-founder of CapStone Technologies. “AutoViri Software integrates the digital and physical workflows to boost productivity and deliver protection against preventable errors that result in costly assessments.”

The AutoViri Software is a part of a full suite of solutions that automate and streamline print-to-mail operations, including robots for sleeving, traying, tagging, and palletizing. The robots are designed to automate various manual, repetitive tasks that are part of typical print-to-mail operations. Used separately or together, AutoViri Solutions help mailers of all sizes operate more efficiently and protect their USPS workshare discount, increasing profitability.

About CapStone Technologies, LLC

CapStone Technologies provides automation services and business engineering to the print-to-mail industry with state-of-the-art robotic technology, advanced innovation, and proven process engineering to create efficiencies and save labor. Its one-of-a-kind software solution connects the physical and digital workflows on the production floor to provide virtual visibility of performance while reducing errors to protect USPS discounts.
